

Problem statement:

- Customer (Atos/zData) stuck with delivering the promised ML/BigData solution to their client (Intertek)
- PM is "lost"
- Scope is not well defined
- Team is underperforming
- Customer is in danger of losing the project because of low quality and late software delivery.

Technologies:

- Attunity, Nifi
- Airflow
- Wandisco
- Hadoop
- Hive
- Python
- ML tools and libraries (scikit-learn,...)
- PostgreSQL
- PowerBI

Response:

- Took over the project management
- Assigned several engineers to the already existing team

Team Profiles:

- Senior PM
- Senior architect
- Data engineers (2x)
- PowerBI specialist

Result:

- Project was turned around (saved) and delivered in acceptable quality and on time.
- Our customer (Atos/zData) continued their cooperation with Intertek
